Summary

Software Engineer with experience building scalable backend systems, event-driven architectures, and AI-powered enterprise applications using Java, Spring Boot, Kafka, AWS, and React. Proficient in microservices, distributed systems, cloud-native development, and full-stack application design, with a strong foundation in data structures, system design, and software engineering best practices.

Experience

HCLTech

Software Developer Intern

Bengaluru

April 2026 – Present

- Developed Java-based solutions and enterprise AI agents using HCLTech's AI Force platform, focusing on intelligent automation and knowledge management for banking use cases.
- Designed a centralized governance agent that integrates information from emails, Microsoft Teams, Excel, and enterprise applications, enabling users to access relevant information through a unified interface.
- Implemented grounded information retrieval and governance mechanisms to reduce AI hallucinations, automate information discovery, and help employees focus on core problem-solving.

GOKBORU Tech

Summer Internship

June 2024 – July 2024

- Completed a 7-week intensive training in HTML, CSS, JavaScript, and React.js, developing and deploying a responsive Movies Web Application on Vercel.

Projects

AI-Powered Project Management Tool (GitHub)

May 2026 – Present

- Developed a Jira-inspired project management platform using React, Spring Boot, and PostgreSQL with workspaces, sprint planning, Kanban boards, and task lifecycle management.
- Secured application access using Spring Security, JWT, OAuth2, and role-based authorization for enterprise applications.
- Enabled real-time collaboration via WebSockets, supporting notifications, activity feeds, team discussions, and cloud-based document storage using AWS S3.
- Leveraged OpenAI APIs, Redis caching, and Docker containers to deliver AI-assisted task management, analytics insights, and scalable deployments.

Barista (GitHub)

March 2026 – Present

- Developed a full-stack coffee shop ordering platform using Java, Spring Boot, React.js, and REST APIs, enabling customers to browse menus and place orders online.
- Implemented a concurrent three-barista order-processing simulation to model real-world order preparation, queue management, and order status tracking.

Skills

Languages: Java, Python, JavaScript, SQL, C, C++

Frameworks: Spring Boot, Spring Security, React.js, Node.js, Express.js, FastAPI

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Docker, Linux, Git, CI/CD

Technologies: Kafka, ELK Stack, JWT, WebSockets, REST APIs, Observability

Core CS: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, System Design, Microservices

AI/ML: Generative AI, RAG, NLP, Vector Databases, OpenAI APIs, Prompt Engineering

Certifications

Generative AI with Large Language Models (01/2024 – 07/2024, Coursera)

Introduction to Large Language Models (01/2024 – 07/2024, Coursera)

Awards & Achievements

HCLTech Hackathon: Selected through the HCLTech Hackathon for developing a Spring Boot-based cafe order management platform that enabled customers to place and manage orders digitally, streamlining the overall ordering workflow (Mar 2026).

LeetCode: Solved 200+ problems in Data Structures & Algorithms, Dynamic Programming, Trees, Graphs, and Problem Solving.

Education

Lovely Professional University

B.Tech in Computer Science (CGPA: 7.28)

Phagwara, Punjab

Sept 2022 – June 2026
