Summary

Software Engineer with experience building scalable backend systems, event-driven architectures, and AI-powered enterprise applications using Java, Spring Boot, Kafka, AWS, and React. Proficient in microservices, distributed systems, cloud-native development, and full-stack application design, with a strong foundation in data structures, system design, and software engineering best practices.

Experience

Infineon Technologies

Software Developer

Bengaluru

July 2025 – May 2026

- Developed a RAG-powered chatbot for Windchill PLM workflows using Java, Spring Boot, React, Kafka, and ELK, improving semantic search accuracy by 40%.
- Orchestrated Kafka-driven indexing pipelines with vector search, improving document discovery by 70% across large datasets.
- Optimized backend services through asynchronous processing, indexing strategies, and query tuning, reducing search latency by 35%.

Cipher Schools

Ludhiana, Punjab

Summer Internship

June 2024 – August 2024

- Engineered a high-performance Notes Maker app using React.js, applying lazy loading and database optimizations to achieve 40% faster load times, 50% improved query efficiency, and a 20% increase in user retention.

Projects

PLM Apps Windchill

July 2025 – May 2026

- Built semantic search capabilities using NLP, RAG, vector databases, and KNN-based retrieval techniques for PLM documents.
- Architected microservices with Java, Spring Boot, Kafka, Redis, and ELK Stack for enterprise-scale document indexing.
- Applied caching, rate limiting, CI/CD automation, and observability practices to strengthen performance and reliability.
- Optimized indexing workflows and retrieval pipelines, improving query response time and search relevance.

AI-Powered Project Management Tool (GitHub)

May 2026 – Present

- Developed a Jira-inspired project management platform using React, Spring Boot, and PostgreSQL with workspaces, sprint planning, Kanban boards, and task lifecycle management.
- Secured application access using Spring Security, JWT, OAuth2, and role-based authorization for enterprise applications.
- Enabled real-time collaboration via WebSockets, supporting notifications, activity feeds, team discussions, and cloud-based document storage using AWS S3.
- Leveraged OpenAI APIs, Redis caching, and Docker containers to deliver AI-assisted task management, analytics insights, and scalable deployments.

CryptoTracker (GitHub)

Sep 2023 – March 2024

- Designed cryptocurrency analytics dashboard tracking 100+ coins with real-time price updates, charts (1D–1Y), and INR/USD conversion via REST APIs.
- Implemented dark/light themes, filtering, and ranking logic using React, Chart.js, and Tailwind CSS, achieving sub-2s load times.

Skills

Languages: Java, Python, JavaScript, SQL, C, C++, Kotlin

Frameworks: Spring Boot, Spring Security, React.js, Node.js, Express.js, FastAPI

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Docker, Linux, Git, CI/CD

Technologies: Kafka, ELK Stack, JWT, WebSockets, REST APIs, Observability

Core CS: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, System Design, Microservices

AI/ML: Generative AI, RAG, NLP, Vector Databases, OpenAI APIs, Prompt Engineering

Certifications

Generative AI with Large Language Models (01/2024 – 07/2024, Coursera)

Introduction to Large Language Models (01/2024 – 07/2024, Coursera)

Awards & Achievements

Hackathon: Selected in an Infineon-organized hackathon by developing a touchpad-based tic-tac-toe system using coordinate tracking technology (Feb 2025).

LeetCode: Solved 800+ algorithmic problems, strengthening expertise in Data Structures, Algorithms, Dynamic Programming, Graphs, Trees, and Problem Solving.

Education

Lovely Professional University

B.Tech in Computer Science (CGPA: 8.37)

Phagwara, Punjab

Sept 2022 – June 2026
